

Proposal in Response to RFP-2026-DATA809

Data Integration & Pipelines

Submitted by **Aventra Software Group** — Data & Analytics

Prepared for **Cascade Family Medicine**

RFP reference	RFP-2026-DATA809
Submitted	August 15, 2026
Vendor	Aventra Software Group
Contact	proposals@aventrasoftware.example · (512) 555-0182
Proposed fee	\$305,000 (fixed price)
Proposed duration	6 months

Sample document. This proposal is fictional and was generated for demonstration purposes. The vendor, prices, team, and all details are invented.

1. Cover letter

August 15, 2026

Robert Chen, VP of Operations
Cascade Family Medicine

Dear Robert Chen,

Thank you for the opportunity to respond to RFP-2026-DATA809 for **Data Integration & Pipelines**. Aventura Software Group has designed, built, and operated custom software for mid-market and enterprise organizations since 2009, delivering more than 300 engagements across healthcare, government, education, financial services, and manufacturing. We specialize in modernizing legacy systems, unifying fragmented data, and shipping applications that teams adopt without a fight.

We have structured this proposal to address each of your requirements directly. The fixed price quoted is **\$305,000**, within your stated budget. This proposal is valid for 90 days.

Sincerely,

Priya Raman

Engagement Director, Aventura Software Group

2. Executive summary

Aventura Software Group proposes to deliver **Data Integration & Pipelines** for Cascade Family Medicine — design and delivery of reliable, monitored data pipelines that move and transform data between systems, eliminating manual exports and dual entry. We will deliver in **6 months** for a **fixed fee of \$305,000**, meeting your **SOC 2, data-governance and retention policies** requirements.

3. Understanding of your needs

Your teams manually export and re-key data between systems, and errors slip through unnoticed. You need automated, monitored pipelines you can trust.

4. Proposed solution

We will build automated ETL/ELT pipelines — scheduled or event-driven — that move and transform data between your systems with validation, reconciliation, lineage, and clear failure alerting, so manual exports and dual entry go away.

The solution provides the following capabilities:

- Automated extract, transform, and load (ETL/ELT) pipelines
- Scheduled and event-driven data movement
- Data validation and reconciliation
- Error handling, retries, and alerting
- Data lineage and processing audit trail
- Secure handling of sensitive fields

Integrations

- Integration with each source and destination system via documented, versioned APIs.
- Integration with the identity provider (SSO) via documented, versioned APIs.
- Integration with monitoring/alerting channels via documented, versioned APIs.

5. Technical approach

Methodology. We deliver in short, fixed-length sprints, each ending with a working, demonstrable increment and a stakeholder review. Every engagement begins with a fixed-scope discovery sprint that confirms requirements, design, and a detailed plan before any build commitment, so scope and pricing reflect a shared understanding of the work.

Hosting. Solutions are cloud-hosted on AWS, Azure, or GCP (your choice), deployed with infrastructure-as-code so environments are reproducible and auditable. We target 99.9% uptime during business hours, with automated backups and a documented recovery objective. You retain ownership of the cloud accounts and all infrastructure code.

Security. Security is reviewed every sprint, not bolted on before launch. All data is encrypted in transit (TLS 1.2+) and at rest (AES-256), privileged access requires multi-factor authentication, and security-relevant events are audit-logged with retention. We follow a secure SDLC with mandatory code review, run annual third-party penetration tests, and maintain a documented vulnerability-management and patching process. Aventura is SOC 2 Type II and ISO/IEC 27001:2022 aligned.

Authentication. We integrate with your existing identity provider using SAML 2.0 or OpenID Connect for single sign-on, with role-based access control and least-privilege defaults. Multi-factor authentication is enforced for privileged accounts.

Integration. Each integration is delivered through documented, versioned REST APIs with a clear contract and explicit error handling. We prove every integration end-to-end in a test environment before it reaches production, and we document assumptions and data mappings for each connected system.

Quality assurance. Quality is built in: automated tests run in CI on every change, all code is peer reviewed, and each release passes a security review before go-live. We support a formal user-acceptance testing phase with your team and track defects to closure against agreed severity and response targets.

Accessibility. All user interfaces are designed and tested to WCAG 2.1 AA (and Section 508 where applicable). Accessibility is validated each sprint with automated tooling and manual screen-reader testing, not deferred to a pre-

launch audit.

6. Project plan and timeline

We will deliver in five phases over **6 months**, each ending with a working, demonstrable increment and a stakeholder review:

Phase	Timeline
Discovery & Design	Month 1
Foundation & Integrations	Months 2–3
Core Build	Month 4
Testing & Hardening	Month 5
Launch & Stabilization	Month 6

7. Project team

We staff dedicated delivery pods — the people who scope your project are the people who build it. Proposed key personnel:

Name	Role	Focus
Priya Raman	Engagement Director	single point of accountability for the program
Marcus Bell	Solution Architect	owns the architecture and integration approach
Elena Duarte	Lead Engineer	owns technical delivery and code quality
Sofia Nguyen	UX Designer	runs user research and accessible interface design
David Okafor	Project Manager	your point of contact for schedule, scope, and status
Grace Kim	QA & Security Lead	owns test strategy and the pre-release security review

8. Relevant experience

Aventra Software Group has designed, built, and operated custom software for mid-market and enterprise organizations since 2009, delivering more than 300 engagements across healthcare, government, education, financial services, and manufacturing. We specialize in modernizing legacy systems, unifying fragmented data, and shipping applications that teams adopt without a fight. We will provide at least three references from comparable **Data Integration & Pipelines** engagements, matched by industry and project type, on request.

9. Pricing

We propose a **fixed fee of \$305,000** (Fixed price by workstream, invoiced on milestones), within your estimated budget of \$160,000 – \$450,000.

Line item	Amount
Discovery & solution design	\$45,000
Development & configuration	\$130,000
Integrations	\$50,000
Data migration & setup	\$25,000
Quality assurance & security testing	\$30,000
Training, documentation & launch	\$20,000
Project management	\$5,000
Total (fixed price)	\$305,000

Pricing approach. We propose a fixed price against the scope confirmed in discovery, itemized by workstream, and invoiced on milestone completion. Change requests are handled through a lightweight change-control process so cost and scope stay aligned. Third-party license and hosting fees are called out separately and are not marked up.

10. Support and service levels

Every launch includes a defined post-launch care plan with a named support lead and tiered service levels: critical issues acknowledged within 1 business hour, high within 4, and standard within 1 business day. The care plan covers monitoring, patching, and enhancements, and is quoted separately as an optional, renewable service.

11. Why Aventura Software Group

Fixed-scope discovery before any build commitment; dedicated delivery pods where the people who scope your project are the people who build it; accessibility and security reviewed every sprint; and full handover of code, infrastructure, and documentation with a defined post-launch care plan. You are never locked in.

Specific to this offering:

- Reconciliation built in — you know the data arrived intact
- Observable pipelines with lineage and clear failure alerts

Certifications: SOC 2 Type II, ISO/IEC 27001:2022, HIPAA-aligned engineering practices, AWS Advanced Consulting Partner, Microsoft Solutions Partner (Digital & App Innovation).

12. Assumptions, exclusions, and risks

Our pricing assumes the scope described in the RFP, timely access to stakeholders and source/target systems, and availability of test environments at project start. Third-party licenses, ongoing hosting, and hardware are excluded from the fixed fee. Integration unknowns are surfaced early in discovery and managed through change control; a named support lead owns post-launch stability.
