

OFFERING DATASHEET

DevOps & Platform Automation

Ship faster and sleep better with automated delivery.

Sample content. Aventra Software Group is a fictional company used for demonstration. Every organization, figure, client, and outcome in this document is invented and does not describe any real entity or engagement.

Offering ID	devops-automation
Product line	Cloud & Platform Engineering
Best fit for	financial services, healthcare, manufacturing, retail, government, education
Compliance frameworks	SOC 2, ISO/IEC 27001
Pricing model	Fixed price by workstream, invoiced on milestones
Indicative range	\$150,000 – \$400,000
Typical duration	5 months

Scope

Establishment of CI/CD pipelines, infrastructure-as-code, and observability so software ships frequently, safely, and repeatably.

Capabilities delivered

Describe these in the proposed-solution section of a response.

- CI/CD pipeline design and implementation
- Infrastructure-as-code for all environments
- Automated testing and quality gates
- Monitoring, logging, and alerting (observability)
- Secrets management and secure deployment
- Release and rollback automation

Requirements this offering answers

If an RFP asks for these, this offering is the right match.

- Automate build, test, and deployment
- Make environments reproducible with infrastructure-as-code
- Add quality and security gates to releases
- Establish monitoring and alerting
- Reduce release risk and manual steps
- Enable frequent, low-drama deployments

Integrations

Name the buyer's actual systems when the RFP identifies them; these are the fallback.

- The source-control and CI system
- The cloud environment
- Monitoring/alerting channels

Differentiators

- Quality and security gates baked into the pipeline
- Observability from day one, not after the first outage

Success measures buyers care about

Mirror these in an executive summary when the RFP states similar goals.

- Build, test, and deploy fully automated
- Environments reproducible from code
- Release risk and manual steps sharply reduced

Approved positioning language

Adapt the wording to the buyer's own terms; keep the substance intact.

Understanding of needs

Releases are manual, risky, and slow, and problems are found in production instead of before it. You want automated, observable delivery.

Proposed solution

We will implement CI/CD pipelines with automated testing and security gates, define every environment as infrastructure-as-code, and stand up monitoring and alerting — so your team ships frequently and safely, with fast rollback.
