

OFFERING DATASHEET

Mobile Application Suite

Field-ready mobile apps that work even offline.

Sample content. Aventra Software Group is a fictional company used for demonstration. Every organization, figure, client, and outcome in this document is invented and does not describe any real entity or engagement.

Offering ID	mobile-app-suite
Product line	Custom Application Development
Best fit for	manufacturing, government, retail, nonprofit
Compliance frameworks	SOC 2, WCAG 2.1 AA
Pricing model	Fixed price by workstream, invoiced on milestones
Indicative range	\$260,000 – \$600,000
Typical duration	8 months

Scope

Design and delivery of native-quality mobile applications for frontline and field staff, with reliable offline operation and sync.

Capabilities delivered

Describe these in the proposed-solution section of a response.

- Offline-capable data capture with automatic sync
- Task and work-order assignment and tracking
- Photo, signature, and barcode/QR capture
- GPS and location tagging of records
- Push notifications for new assignments
- Supervisor dashboard for field activity

Requirements this offering answers

If an RFP asks for these, this offering is the right match.

- Mobile app for field or frontline staff
- Reliable operation with no or intermittent connectivity
- Capture of photos, signatures, and scanned codes
- Real-time visibility of field activity for supervisors
- Sync of field data into the core system of record
- Secure sign-in for staff devices

Integrations

Name the buyer's actual systems when the RFP identifies them; these are the fallback.

- The core work-order / system of record
- The asset or inventory system
- The identity provider (SSO)

Differentiators

- Offline-first architecture proven in low-connectivity environments
- One codebase deployed to both iOS and Android

Success measures buyers care about

Mirror these in an executive summary when the RFP states similar goals.

- Paper forms eliminated for core field workflows
- Field data available in core systems in near real time
- Reduction in data-entry errors and rework

Approved positioning language

Adapt the wording to the buyer's own terms; keep the substance intact.

Understanding of needs

Your field teams need tools that work wherever they are — including with no signal — and that get clean data back into your core systems without manual re-entry.

Proposed solution

We will deliver an offline-first mobile suite for iOS and Android: field staff capture data, photos, signatures, and scans on-device, and everything syncs automatically when connectivity returns. Supervisors get a live dashboard of field activity.
