

OFFERING DATASHEET

API Development & Management

Turn your systems and data into governed, reusable APIs.

Sample content. Aventra Software Group is a fictional company used for demonstration. Every organization, figure, client, and outcome in this document is invented and does not describe any real entity or engagement.

Offering ID	api-platform
Product line	Integration & APIs
Best fit for	financial services, healthcare, retail, government, manufacturing
Compliance frameworks	SOC 2, data-governance and retention policies
Pricing model	Fixed price by workstream, invoiced on milestones
Indicative range	\$170,000 – \$450,000
Typical duration	6 months

Scope

Design, build, and management of secure, documented APIs that expose the organization's systems and data for internal and partner use.

Capabilities delivered

Describe these in the proposed-solution section of a response.

- RESTful API design following clear standards
- API gateway, authentication, and rate limiting
- Interactive, versioned API documentation
- Developer onboarding and access management
- Usage monitoring and analytics
- Backward-compatible versioning

Requirements this offering answers

If an RFP asks for these, this offering is the right match.

- Expose internal systems and data through secure APIs
- Govern access with authentication and rate limiting
- Provide clear, versioned documentation
- Onboard internal or partner developers
- Monitor API usage and performance
- Support backward-compatible versioning

Integrations

Name the buyer's actual systems when the RFP identifies them; these are the fallback.

- The systems of record being exposed
- The identity provider (SSO / OAuth)
- The API gateway and monitoring tools

Differentiators

- Standards-based, versioned APIs partners can build on
- Governance and monitoring built into the gateway

Success measures buyers care about

Mirror these in an executive summary when the RFP states similar goals.

- Systems exposed through secure, documented APIs
- Developer onboarding self-service and governed
- API usage monitored and performant

Approved positioning language

Adapt the wording to the buyer's own terms; keep the substance intact.

Understanding of needs

You want to unlock the data and functions trapped in your systems — for internal teams or partners — through secure, well-governed APIs rather than one-off point integrations.

Proposed solution

We will design standards-based REST APIs, front them with a gateway that handles authentication, rate limiting, and monitoring, and publish interactive, versioned documentation with self-service developer onboarding.
