

OFFERING DATASHEET

Data Integration & Pipelines

Move data reliably between the systems that need it.

Sample content. Aventra Software Group is a fictional company used for demonstration. Every organization, figure, client, and outcome in this document is invented and does not describe any real entity or engagement.

Offering ID	data-integration
Product line	Data & Analytics
Best fit for	healthcare, financial services, manufacturing, retail, education, government
Compliance frameworks	SOC 2, data-governance and retention policies
Pricing model	Fixed price by workstream, invoiced on milestones
Indicative range	\$160,000 – \$450,000
Typical duration	6 months

Scope

Design and delivery of reliable, monitored data pipelines that move and transform data between systems, eliminating manual exports and dual entry.

Capabilities delivered

Describe these in the proposed-solution section of a response.

- Automated extract, transform, and load (ETL/ELT) pipelines
- Scheduled and event-driven data movement
- Data validation and reconciliation
- Error handling, retries, and alerting
- Data lineage and processing audit trail
- Secure handling of sensitive fields

Requirements this offering answers

If an RFP asks for these, this offering is the right match.

- Eliminate manual data exports and dual entry
- Move data automatically between systems on a schedule or event
- Validate and reconcile data in flight
- Alert on failures with clear diagnostics
- Maintain lineage and an audit trail
- Handle sensitive fields securely

Integrations

Name the buyer's actual systems when the RFP identifies them; these are the fallback.

- Each source and destination system
- The identity provider (SSO)
- Monitoring/alerting channels

Differentiators

- Reconciliation built in — you know the data arrived intact
- Observable pipelines with lineage and clear failure alerts

Success measures buyers care about

Mirror these in an executive summary when the RFP states similar goals.

- Manual exports and dual entry eliminated
- Data moved reliably with reconciliation
- Failures surfaced and resolved via alerting

Approved positioning language

Adapt the wording to the buyer's own terms; keep the substance intact.

Understanding of needs

Your teams manually export and re-key data between systems, and errors slip through unnoticed. You need automated, monitored pipelines you can trust.

Proposed solution

We will build automated ETL/ELT pipelines — scheduled or event-driven — that move and transform data between your systems with validation, reconciliation, lineage, and clear failure alerting, so manual exports and dual entry go away.
