

## OFFERING DATASHEET

# Legacy Application Modernization

*Retire risky legacy systems without a big-bang rewrite.*

*Sample content. Aventra Software Group is a fictional company used for demonstration. Every organization, figure, client, and outcome in this document is invented and does not describe any real entity or engagement.*

|------------------------------|----------------------------------------------------------------------|
| <b>Offering ID</b>           | legacy-modernization                                                 |
| <b>Product line</b>          | Custom Application Development                                       |
| <b>Best fit for</b>          | government, financial services, healthcare, manufacturing, education |
| <b>Compliance frameworks</b> | SOC 2, WCAG 2.1 AA                                                   |
| <b>Pricing model</b>         | Fixed price per phase, invoiced on milestones                        |
| <b>Indicative range</b>      | \$400,000 – \$1,200,000                                              |
| <b>Typical duration</b>      | 12 months                                                            |

## Scope

Incremental modernization of an aging, hard-to-maintain application onto a supported, cloud-native architecture with no loss of business function.

## Capabilities delivered

*Describe these in the proposed-solution section of a response.*

- Assessment of the existing system and modernization roadmap
- Incremental re-platforming (strangler-fig approach)
- Data migration with validation and reconciliation
- Preservation and improvement of existing business rules
- Cloud-native, supportable target architecture
- Parallel-run and cutover planning

## Requirements this offering answers

*If an RFP asks for these, this offering is the right match.*

- Replace an unsupported or high-risk legacy application
- Preserve existing business rules and data
- Minimize disruption during transition
- Migrate historical data with validation
- Move to a supportable, cloud-hosted platform
- Reduce ongoing maintenance cost and risk

## Integrations

*Name the buyer's actual systems when the RFP identifies them; these are the fallback.*

- The legacy database
- Downstream systems that consume legacy data
- The identity provider (SSO)

## Differentiators

- Incremental strangler-fig approach avoids risky big-bang cutovers
- Business rules are re-verified, not blindly copied

## Success measures buyers care about

*Mirror these in an executive summary when the RFP states similar goals.*

- Legacy system retired with no loss of function
- Historical data migrated and reconciled
- Measurable reduction in maintenance cost and risk

## Approved positioning language

*Adapt the wording to the buyer's own terms; keep the substance intact.*

### Understanding of needs

You are carrying an aging system that is expensive and risky to maintain, and you need to modernize it without disrupting the business or losing years of data and hard-won business rules.

### Proposed solution

We modernize incrementally using a strangler-fig approach: new, cloud-native components take over function piece by piece behind a stable interface, so the old system is retired gradually and safely. Data is migrated with validation and reconciliation, and every business rule is re-verified as it moves.
